

TAMWORTH-IN-ARDEN CHURCH: SHOWING POSITION OF NEW ORGAN.

NEW ORGAN, TAMWORTH-IN-ARDEN CHURCH.

This organ, which has been erected in Tamworth-in-Arden Church, Warwickshire, was presented by Mr. F. E. and Mrs. Muntz, of Umberslade, Hockley Heath, in memory of their two late sons, at a cost of nearly £900. The instrument is divided and bracketed out from the walls, part being hung on the north, and part on the south of chancel, thus doing away with the necessity of an organ-chamber, and also obtaining the full tonal effects of the organ, which is often lost when organs are placed in confined chambers. The great and swell organ on north walk is connected to the pedal organ on south side by a conduit beneath the chancel floor, which contains the pneumatic tubes and wind-trunk. The church, which dates from the 13th century, was restored by the late George Edmund Street, R.A., about thirty years ago, and the chancel screen, as seen in view, was erected from his designs. The oak cases have been carried out by Mr. Robert Bridgeman, of Lichfield, Messrs. Porritt and Son, of Leicester, constructing the organ interior, and Mr. Horace G. Bradley, of Birmingham, was employed as the architect for the work. The accompanying plan of the church shows the position of the organ.
